## Centrifugal Pumps

### Multistage High-pressure Centrifugal Pumps

## Multitec/Multitec-RO

**i** The product illustrated as an example may include options incurring a surcharge.

### Main applications

- Water supply systems
- Drinking water supply
- Pressure boosting
- General irrigation systems
- Fossil-fuelled power stations
- Hot-water supply
- Condensate transport
- Boiler feed applications
- Heating systems
- Filtering systems
- Fire-fighting systems
- Snow-making systems
- Washing plants
- Industrial plants
- Desalination plants
- Geothermal plants
- Heat recovery systems

### Fluids handled

- Water
- Drinking water
- Feed water
- High-temperature hot water

- Condensate
- Fire-fighting water
- Solvents
- Lubricants
- Fuels
- Cooling water
- Water/oil emulsions
- Seawater
- Thermal water

### Operating data

#### Operating properties

Characteristic	Value	
Size	DN	32 - 250
Flow rate	Q [m³/h]	≤ 1500
	Q [l/s]	≤ 417
Head	H [m]	≤ 1000 <sup>1)</sup>
Fluid temperature	T [°C]	≥ -10 ≤ +200 <sup>1)</sup>
Operating pressure	p <sub>2</sub> [bar] <sup>2)</sup>	≤ 100 <sup>1)</sup>

### Designation

#### Example: Multitec<sup>3)</sup> A 32/8E-2.1 12.167 (SP)

#### Designation key

Code	Description
Multitec	Type series
A	Installation type
32	Nominal discharge nozzle diameter [mm]
8E	No. of stages / impeller combination
2.1	Hydraulic system
12	Material code
167	Seal code
SP	Code for special variants (optional)

#### Example: Multitec-RO<sup>4)</sup> A 100/5-8.1 31.80

#### Key to the designation

Code	Description
Multitec-RO	Type series
A	Installation type
100	Nominal discharge nozzle diameter [mm]
5	Number of stages
8.1	Hydraulic system
31	Casing material (duplex stainless steel)
80	Seal code

1) Only for individual sizes/designs

2) The sum of inlet pressure and shut-off head must not exceed the value indicated.

3) Code: MTC

4) Code: MTC-RO

## Design details

### Design

- Multistage centrifugal pump in ring-section design
- Horizontal installation in long-coupled or close-coupled design
- Vertical installation in close-coupled design or with universal joint shaft

### Pump casing

- Suction casing: axial or radial
- Radial suction casing and discharge casing: nozzles can be turned in steps of 90°
- Flanges to EN and ASME (holes and flange facing)
- Identical seal housing for gland packing and mechanical seal
- Stage casings, discharge casings and seal housing sealed by confined O-rings

### Drive

- 50 Hz and 60 Hz electric motor
- Can be driven by diesel engine or turbine

### Impeller type

- Closed radial impeller with multiply curved vanes

### Bearings

- Fixed bearing, drive end: rolling element bearing
- Radial bearing, non-drive end: either plain bearing or rolling element bearing, depending on the type of installation
- Rolling element bearing grease or oil lubricated
- Plain bearing lubricated by fluid handled
- Self-aligning

### Coupling

Long-coupled design:

- Flexible coupling with or without spacer

Close-coupled design:

- Up to DN 65 with rigid coupling

### Coupling guard

Standard:

- Coupling guard, cylindrical

Optional:

- Coupling guard, tread-proof

### Shaft seal

- Uncooled gland packing, with or without barrier fluid
- Standardised mechanical seal to EN 12756
- Cartridge mechanical seal

### Materials

- Casing: grey cast iron, nodular cast iron, steel, stainless steel, duplex stainless steel, super duplex stainless steel
- Hydraulic system: grey cast iron, bronze, stainless steel, duplex stainless steel, super duplex stainless steel

## Technical description

Installation types A, B, C and D

Installation type	A <sup>5)</sup>	B <sup>5)</sup>	C <sup>5)</sup>	D <sup>6)</sup>		
	<ul style="list-style-type: none"> <li>▪ Horizontal design, long-coupled</li> <li>▪ Only one shaft passage (drive end)</li> <li>▪ Rolling element bearing at the drive end / plain bearing on the suction side</li> <li>▪ Axial suction nozzle (block flange up to size 50)</li> <li>▪ Drive on discharge side</li> </ul>	<ul style="list-style-type: none"> <li>▪ Horizontal design, long-coupled</li> <li>▪ Only one shaft passage (drive end)</li> <li>▪ Rolling element bearing at the drive end / plain bearing on the suction side</li> <li>▪ Radial suction nozzle</li> <li>▪ Drive on discharge side</li> </ul>	<ul style="list-style-type: none"> <li>▪ Horizontal design, long-coupled</li> <li>▪ With two shaft passages</li> <li>▪ Rolling element bearings at the drive end and on the suction side</li> <li>▪ Drive on discharge side</li> </ul>	<ul style="list-style-type: none"> <li>▪ Horizontal design, long-coupled</li> <li>▪ With two shaft passages</li> <li>▪ Rolling element bearings at the drive end and on the discharge side</li> <li>▪ Drive on suction side</li> </ul>		
	Multitec-RO: installation type A only			DN 200, DN 250: installation types C and D only		
Drive	Electric motor, diesel engine, turbine					
Axial thrust balancing	By balance drum <sup>7)</sup>					
Q <sub>max</sub> <sup>8)</sup>	850 m <sup>3</sup> /h		1500 m <sup>3</sup> /h			
H <sub>max</sub>	630 m (1000 m <sup>9)</sup> )					
P <sub>2 max</sub>	63 bar (100 bar <sup>9)</sup> )					
t <sub>max</sub>	-10 °C to +200 °C, Multitec-RO up to 45 °C					
Shaft seal	Uncooled gland packing, cooled or uncooled mechanical seal; single or double cartridge seal					
Material	<b>Casing:</b> <ul style="list-style-type: none"> <li>▪ Grey cast iron, steel, stainless steel for Multitec</li> <li>▪ Duplex and super duplex stainless steel for Multitec-RO</li> </ul> <b>Hydraulic system:</b> <ul style="list-style-type: none"> <li>▪ Grey cast iron, bronze, stainless steel for Multitec</li> <li>▪ Duplex and super duplex stainless steel for Multitec-RO</li> </ul>	<b>Casing:</b> grey cast iron, nodular cast iron <sup>10)</sup> , steel, stainless steel <b>Hydraulic system:</b> grey cast iron, bronze, steel, stainless steel				

5) The direction of rotation is clockwise, seen from the motor end.

6) The direction of rotation is counter-clockwise, seen from the motor end.

7) For small numbers of stages without balance drum the axial thrust is completely absorbed by the thrust bearing.

8) The indicated Q values apply to 50 Hz; for 60 Hz values refer to the individual characteristic curves.

9) Only for individual sizes/designs

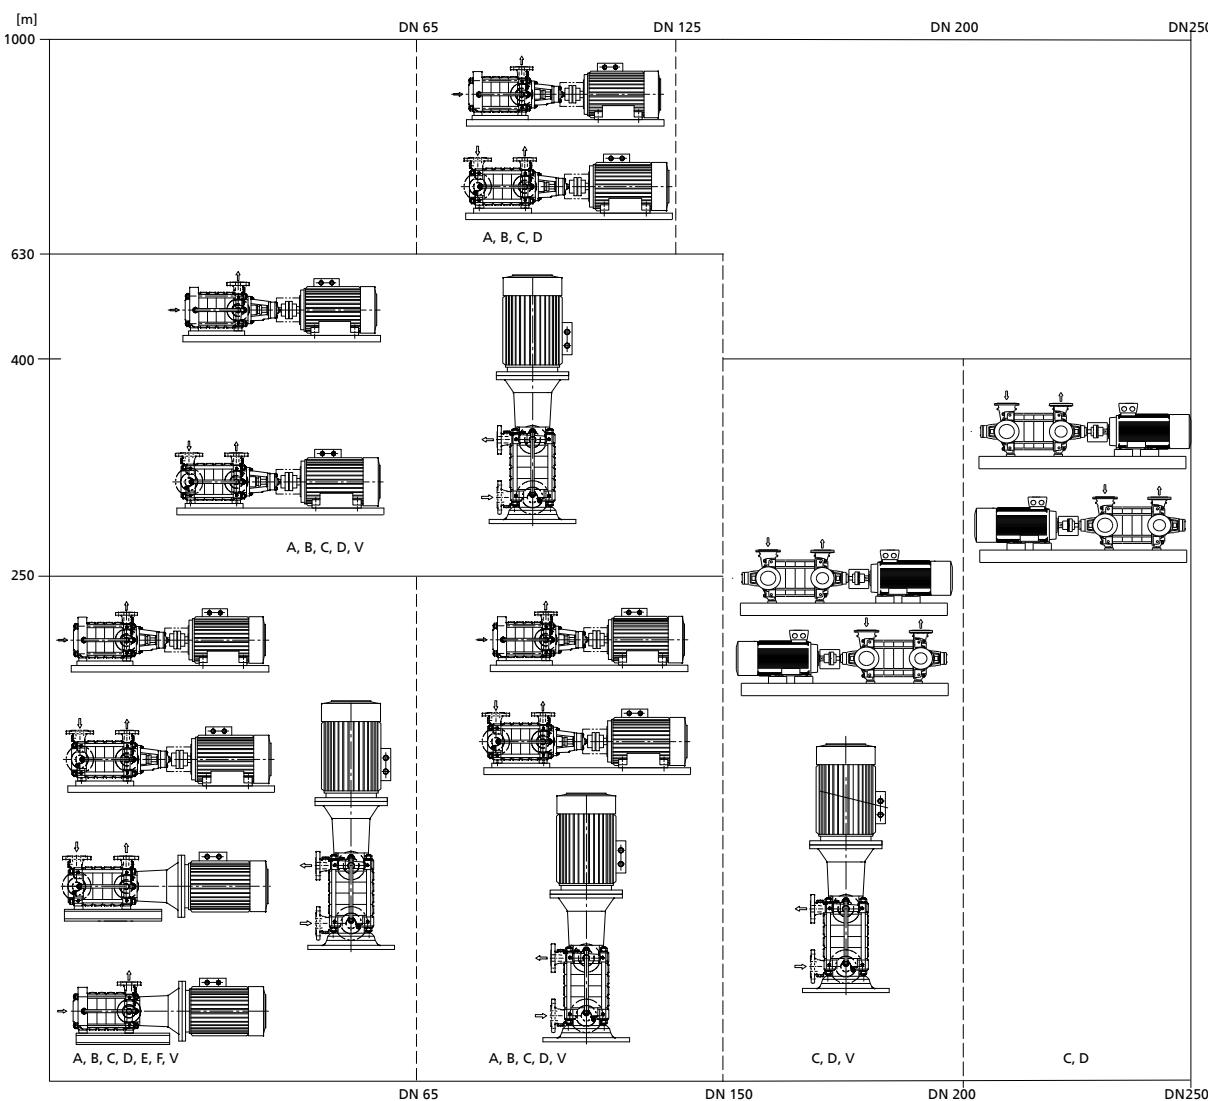

10) For DN 200 and DN 250 only

Installation types E, F and V

Installation type	E <sup>5)</sup>	F <sup>5)</sup>	V <sup>5)</sup>
	<ul style="list-style-type: none"> <li>▪ Horizontal close-coupled pump</li> <li>▪ Common bearing for pump and motor</li> <li>▪ Rigid coupling</li> <li>▪ Radial suction nozzle</li> <li>▪ Plain bearing at the suction side</li> </ul>	<ul style="list-style-type: none"> <li>▪ Horizontal close-coupled pump</li> <li>▪ Common bearing for pump and motor</li> <li>▪ Rigid coupling</li> <li>▪ Axial suction nozzle</li> <li>▪ Plain bearing at the suction side</li> </ul>	Vertical close-coupled pump
H/Q range <sup>8)</sup>	100 m <sup>3</sup> /h, 250 m, up to nominal diameter 65	100 m <sup>3</sup> /h, 250 m, up to nominal diameter 65	Up to 400 kW
Drive	Standardised motor	Standardised motor, fixed bearing at the drive end <sup>11)</sup>	Standardised motor
Fixed bearing	Motor <sup>11)</sup>	Motor <sup>11)</sup> : DN 32, DN 50, DN 65	In lantern: DN 100, DN 125, DN 150, DN 200

Q <sub>max</sub> <sup>8)</sup>	100 m <sup>3</sup> /h		850 m <sup>3</sup> /h
H <sub>max</sub>	250 m		630 m
P <sub>2 max</sub>	40 bar		63 bar
t <sub>max</sub>	-10 °C to +140 °C		-10 °C to +140 °C
Shaft seal	Uncooled gland packing, uncooled mechanical seal, single	Uncooled gland packing, uncooled mechanical seal, single	
Material	<b>Casing:</b> grey cast iron <b>Hydraulic system:</b> grey cast iron, bronze	<b>Casing:</b> grey cast iron, nodular cast iron <sup>12)</sup> , steel, stainless steel <b>Hydraulic system:</b> Grey cast iron, bronze, stainless steel	

11) For Multitec 32, Multitec 50 and Multitec 65 the motor bearings on the coupling side are fixed bearings  
 12) For Multitec 200 only

### Operating ranges by installation type

**Fig. 1:** Operating ranges by installation type

## Product benefits

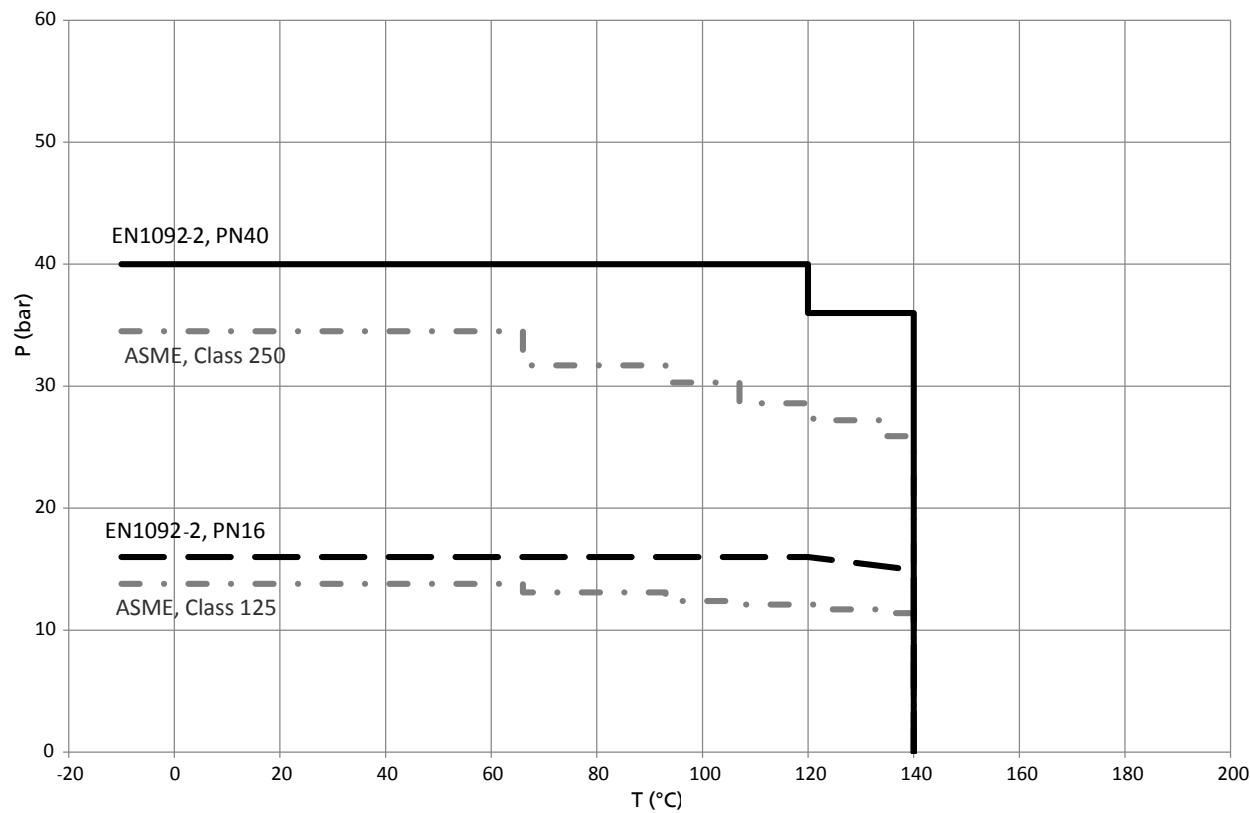

- Space-saving compact design with axial inlet and product-lubricated plain bearing
- Flexible, best matching adaptation to system condition by variety of installation types and variable nozzle position
- Low NPSH value, improved suction behaviour and operating reliability for suction lift operation by special suction impeller
- Optimised efficiencies and reduced operating costs by newly developed hydraulic system
- Versatile use by broad range of installation types, materials and shaft seals
- Optimum selection for fluid to be pumped and operating conditions by large choice of materials
- High resistance by casing wear rings / closing discs made of corrosion-resistant material, economical and easy to replace
- Shaft protected from wear by shaft protecting sleeve made of stainless steel
- Axial thrust balancing by balance drum
  - Low bearing load at changing operating condition
  - Long life of rolling element bearings and shaft seals
  - Use of standardised seals due to lower pressure in the shaft seal chamber
- Longer service life, higher operating reliability, lower operating costs, maintenance costs and investment costs by maintenance-free, robust plain bearing made of silicon carbide, also suitable for operation with frequent starts/stops.
- Service-friendly by bearing assembly and mechanical seal being easy to dismantle

## Acceptance tests and warranty

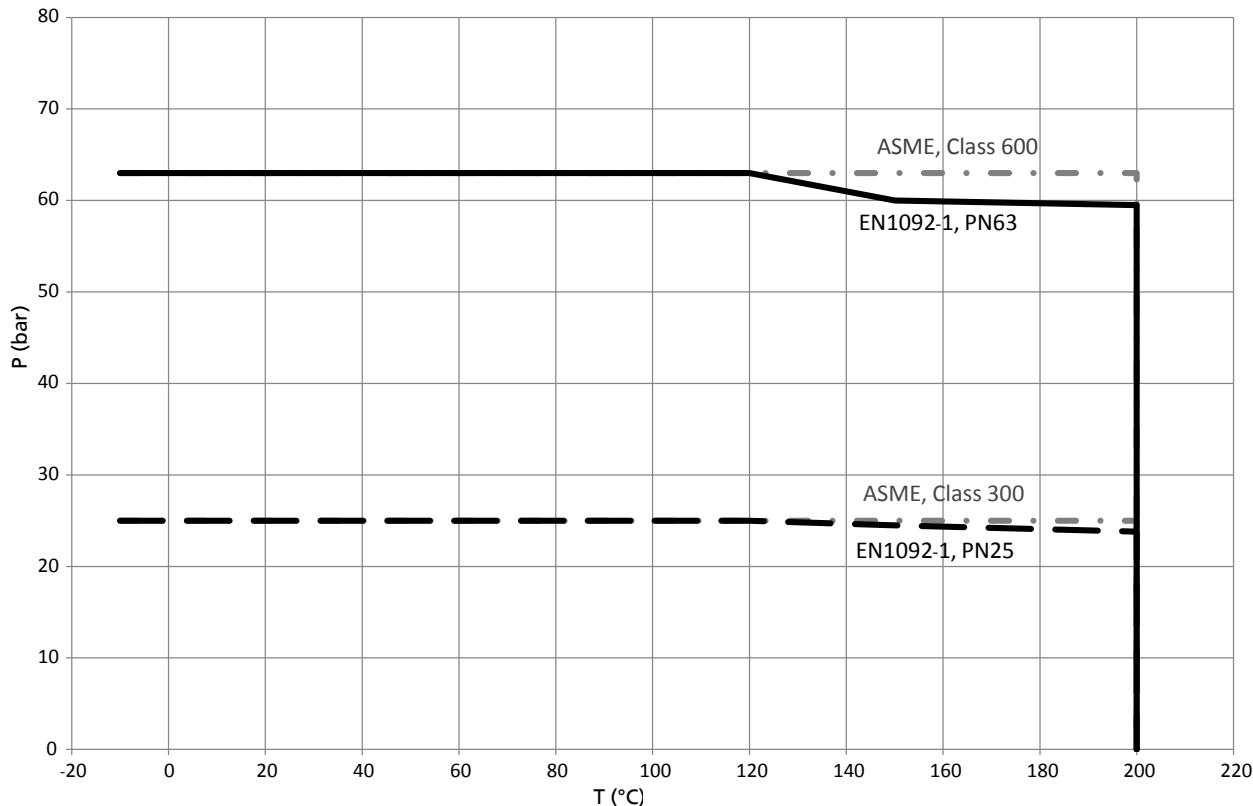

### Certificates / inspections/ acceptance tests on request:

- Test reports 2.2 to EN 10204 for pressure-retaining components, shaft and impellers
- Hydrostatic pressure test of pressure-retaining components
- Balancing test
- Hydraulic tests:
  - Performance test to ISO 9906 or Hydraulic Institute
  - NPSH test
  - Vibration test
  - Bearing temperature measurement
- Strip test
- Dimensional inspection
- Coating inspection
- Final inspection and testing

**Pressure and temperature limits**

 Material JL1040 (GJL-250), EN-GJS 400-15<sup>13)</sup>

Material GP240GH+N (1.0619+N)

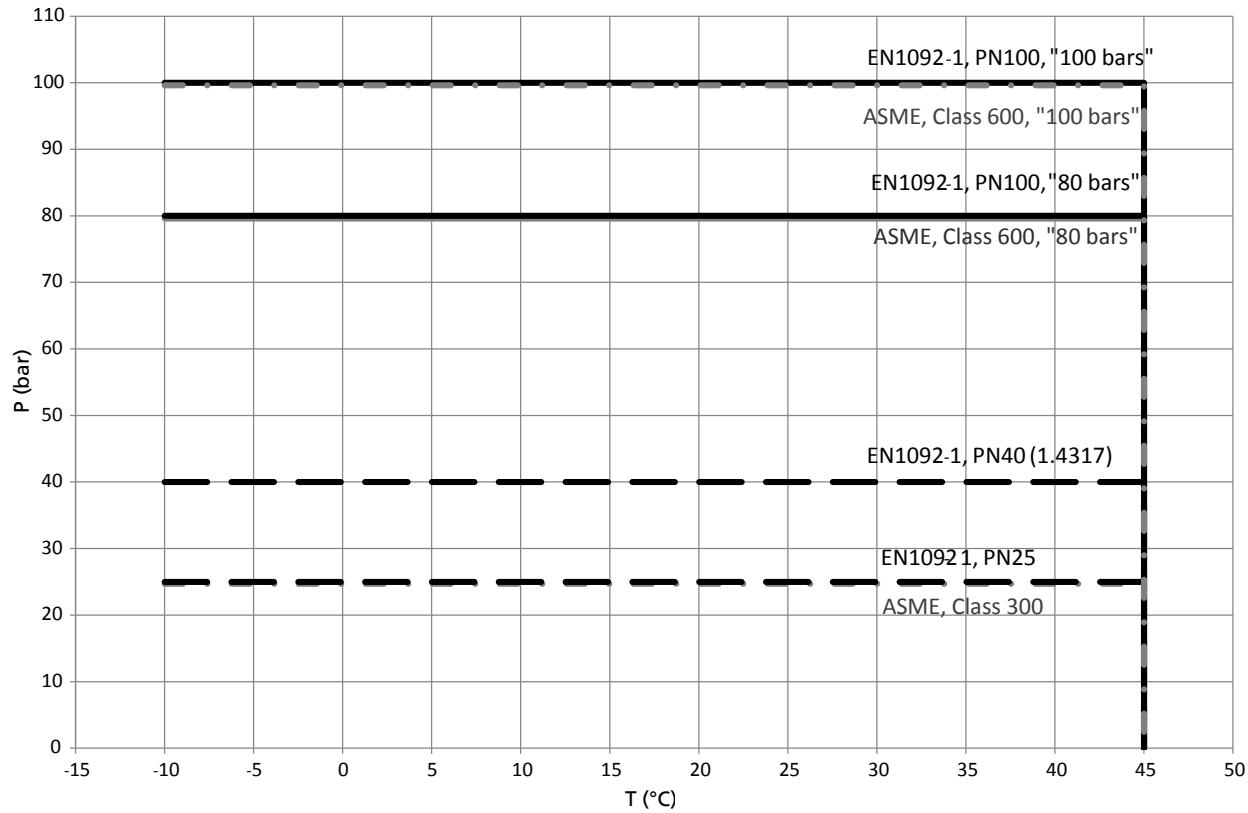

13) Only for fluid temperatures up to 60 °C

## Material 1.4408

## Material 1.4317, 1.4517, 1.4469

## Seal codes for the mechanical seal

Available versions of mechanical seals:

- Balanced and unbalanced
- Uncooled up to 140 °C or cooled up to 200 °C
- Single or double
- Cartridge mechanical seal

Key to the material code of the mechanical seal

Code	Material
A	Carbon graphite, antimony-impregnated
B	Carbon graphite, resin-impregnated
Q1	Silicon carbide, solid, sintered without pressure
Q12	Silicon carbide, shrink-fitted, sintered without pressure
U2	Tungsten carbide, Ni-bonded (solid)

Code	Material
U3	Tungsten carbide, NiCrMo-bonded
E	EPDM rubber
E4	EPDM peroxide-cured
V	Fluoroelastomer, e.g. Viton
V5	Fluoroelastomer, e.g. Viton (90 shore)
M	Hastelloy
G	CrNiMo steel

Seal codes of the mechanical seal

Mechanical seal	Material	Static sealing elements	Uncooled				Cooled	Pressure [bar]	
			≤ 45 °C	≤ 100 °C	≤ 120 °C	≤ 140 °C		Min.	Max.

		AQ1VMG	FPM	95 (Cartex SN6)	-	-	-	-0,5	25

32) For 5B

33) For H7N

34) MG13 for sizes DN 32 and DN 50. MG1S4 for size DN 65.

35) Only for sizes DN 100, 125, 150, 200 and 250.

### Seal codes for the gland packing

Available versions: uncooled up to 140 °C

Seal codes for gland packing

Gland packing	Static sealing elements	Seal code		$P_{\max}$ [bar]
		Up to 100 °C	Up to 140 °C	
PTFE-impregnated polyacryl	FPM	65	-	25
PTFE-impregnated polyacryl	EPDM	66		25

Gland packing versions

	N/b	N/c
System conditions	Suction head operation $P_s$ $\text{absolute} \geq 1 \text{ bar}$	$P_s$ $\text{absolute} < 1 \text{ bar}$ (vessel under vacuum) with clean liquid from an external source Barrier pressure > pressure to be sealed off
Technical features	Without lantern ring	1 lantern ring, suction side 1 lantern ring, discharge side 2 tapped holes for piping

1000	82,5	-	84	-
1120	82,5	-	84	-
1200	82,5	-	84	-
Up to 1400	83	-	84	-

Noise characteristics for other ratings/speeds on request.

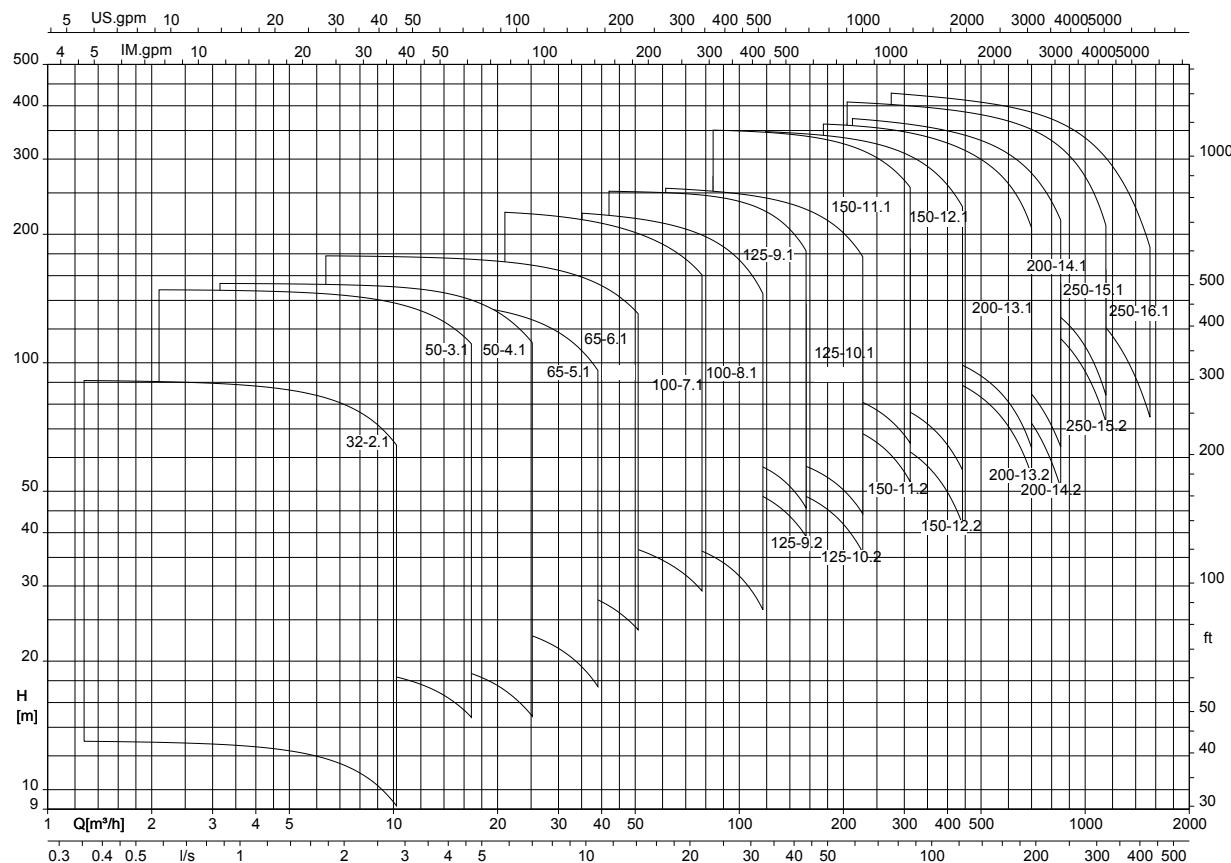

Noise characteristics can only be guaranteed after consultation with the design/engineering department.

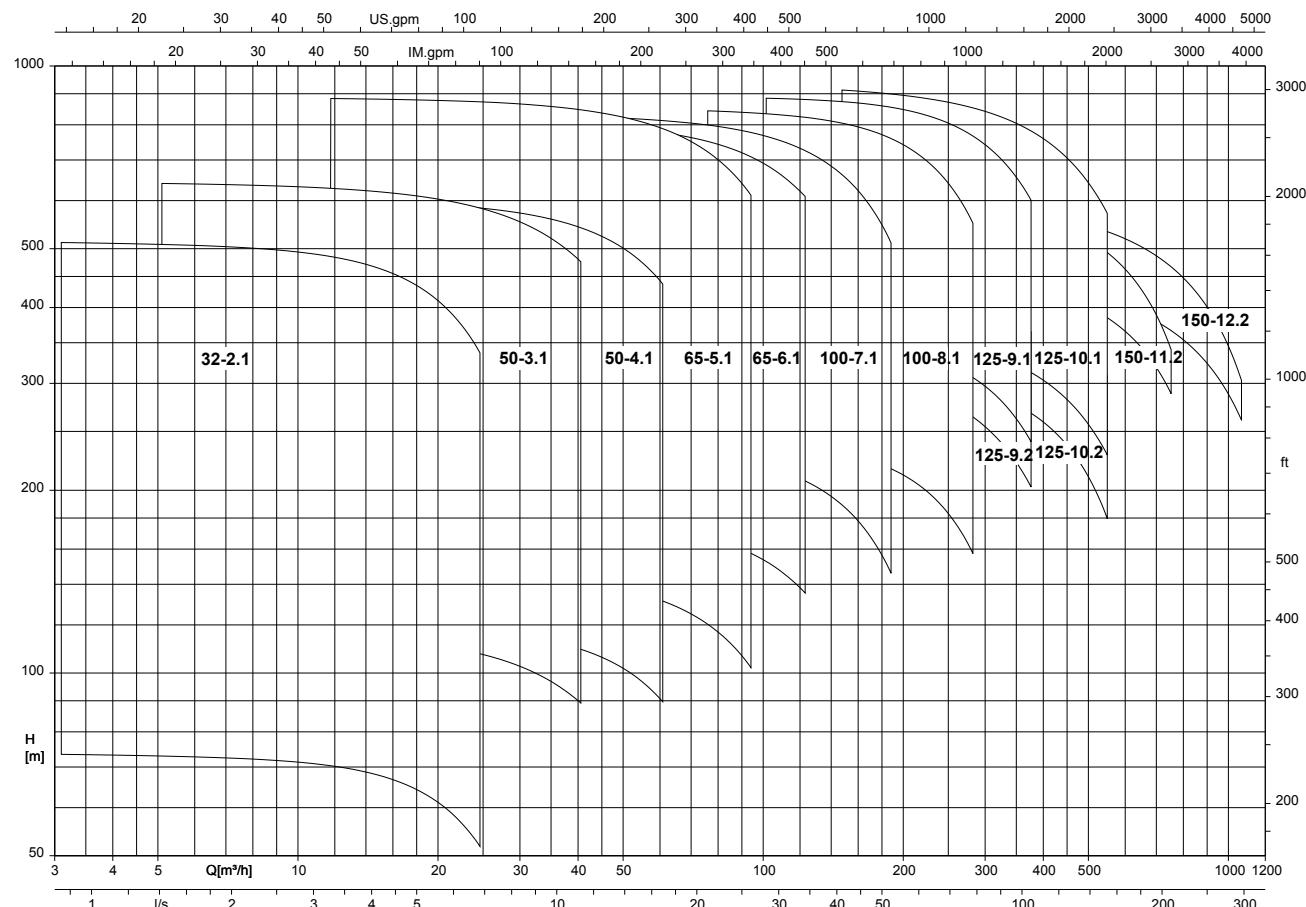

## Selection Charts

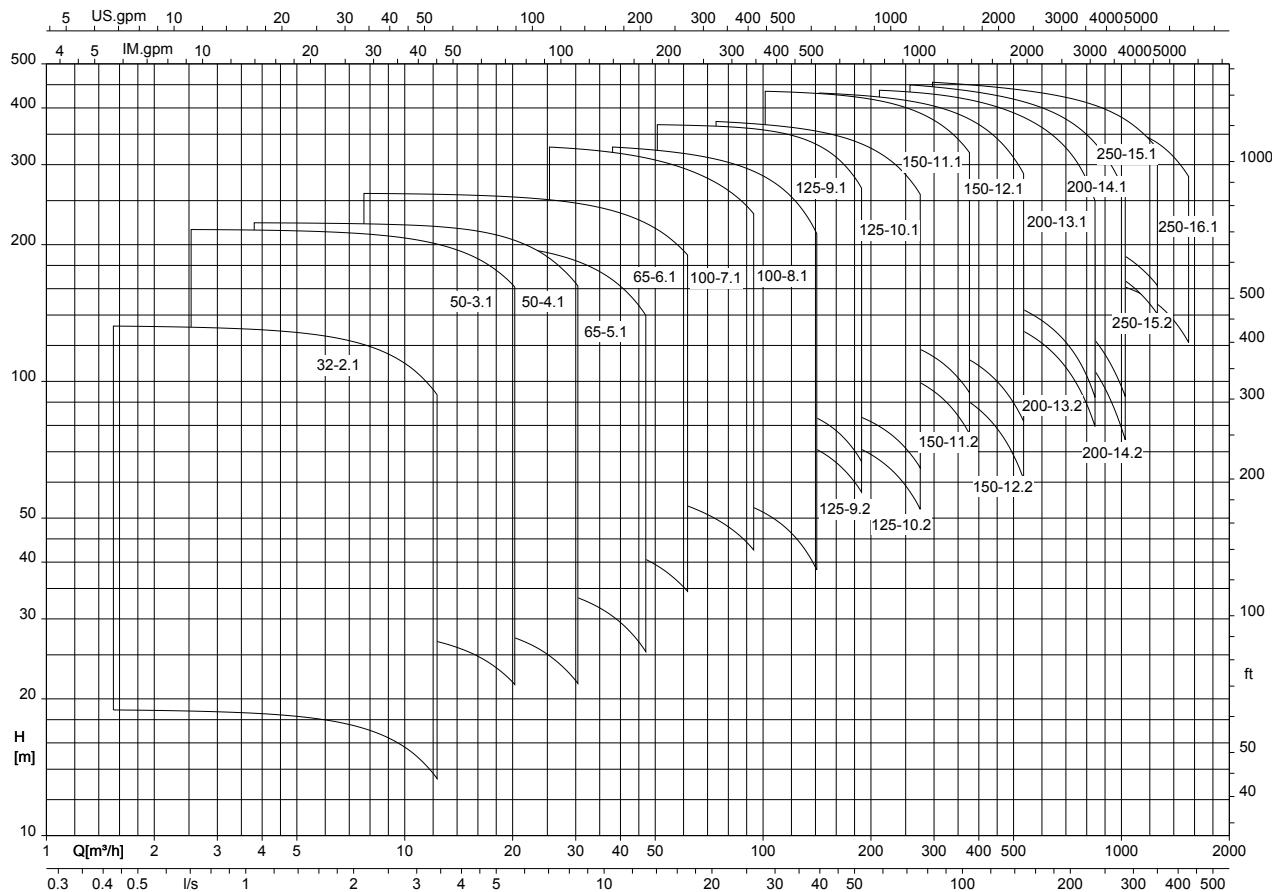

Multitec/Multitec-RO, 50 Hz,  $n = 2900$  rpm

## Multitec/Multitec-RO, 50 Hz, n = 1450 rpm

**Multitec/Multitec-RO, 60 Hz, n = 3500 rpm**

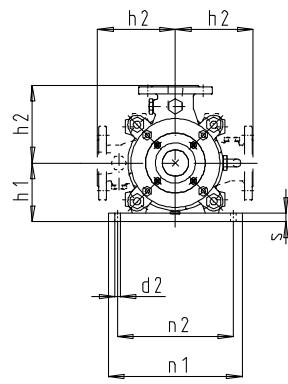

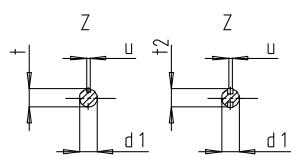

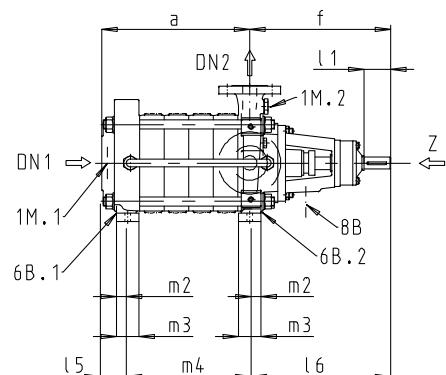

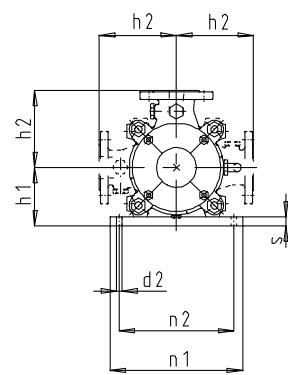

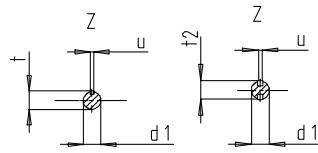

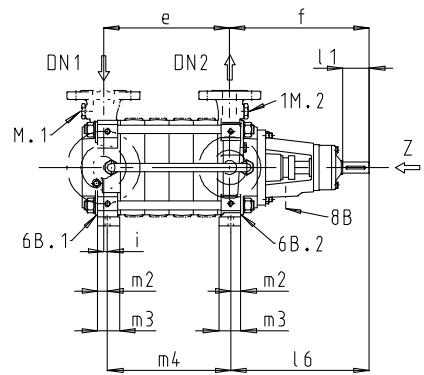

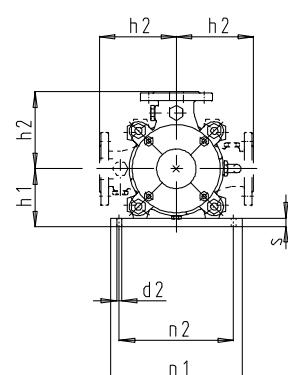

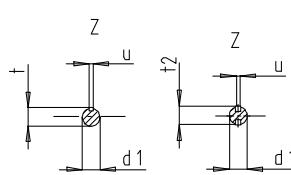

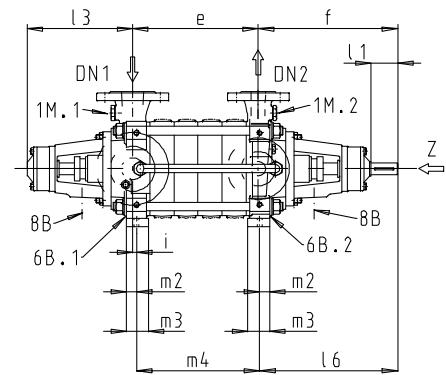

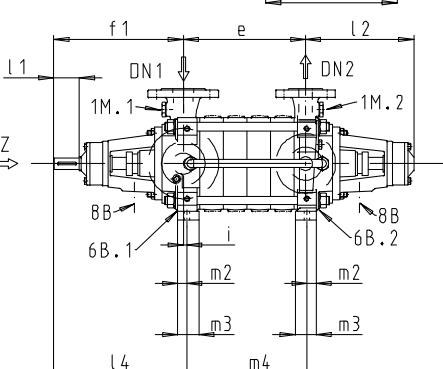

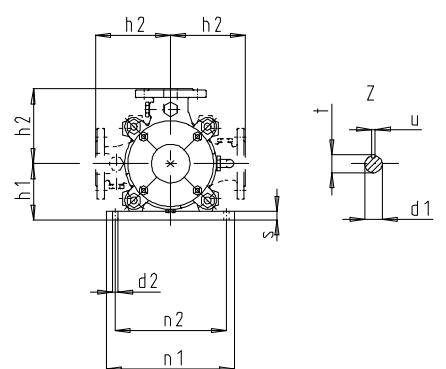

**Multitec/Multitec-RO, 60 Hz, n = 1750 rpm**

**Drive**

Driven by a three-phase current squirrel-cage motor of the following types of construction:

**Types of construction**

	<b>Included</b>
Installation types A, B, C, D	IMB3
Installation types E, F	IMV1 up to 45 kW, for higher ratings IMB35
Installation type V	IMV1
Enclosure	IP 55/IP 23
Thermal class	F
Direction of rotation of the pump	<ul style="list-style-type: none"> <li>▪ Installation types A, B, C, E, F, V: clockwise, seen from the drive end</li> <li>▪ Installation type D: counter-clockwise, seen from the drive end</li> </ul>
Options	Special voltages, explosion protection, insulated bearing, standstill heater

46) For size 32: discharge flange DN 1 1/4" can also be supplied as DN 1 1/2" on request.

47) For Multitec 100 and 125 only

## Nozzle positions

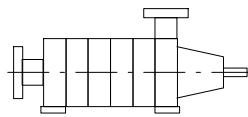

The nozzle position is variable. The required nozzle position has to be selected when completing an order in the selection program.

**i** For all pump sizes and material variants nozzle position 0-0 (or illustration 2 for vertical installations) is only available for versions with 3 or more stages. An exception is DN 150 in material variants 10, 11, 12, 13 and 14, for which nozzle position 0-0 is available for versions with 2 or more stages. The nozzle position is generally defined seen from the drive.

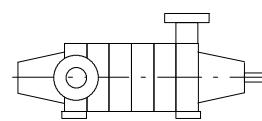

### Horizontal installation (A, B, C, D, E and F)

The first letter defines the suction nozzle, the second letter the discharge nozzle.

A - axial suction nozzle

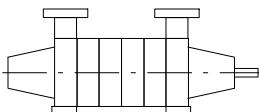

A - 0

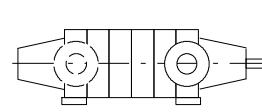

L - 0

0 - suction and/or discharge nozzle on top

0 - 0

R - suction and/or discharge nozzle on the right

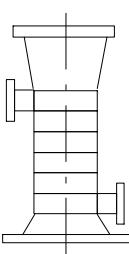

R - L

L - suction and/or discharge nozzle on the left

### Vertical installation

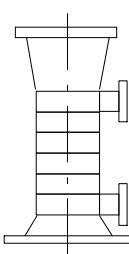

The suction nozzle (at the bottom) serves as a fixed point. The illustration number indicates the offset position of the discharge nozzle compared to the suction nozzle.

1 - offset by 180°

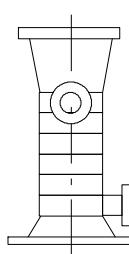

1

2 - aligned

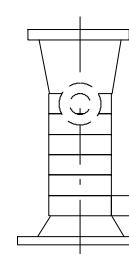

2

3 - 90° offset to the left

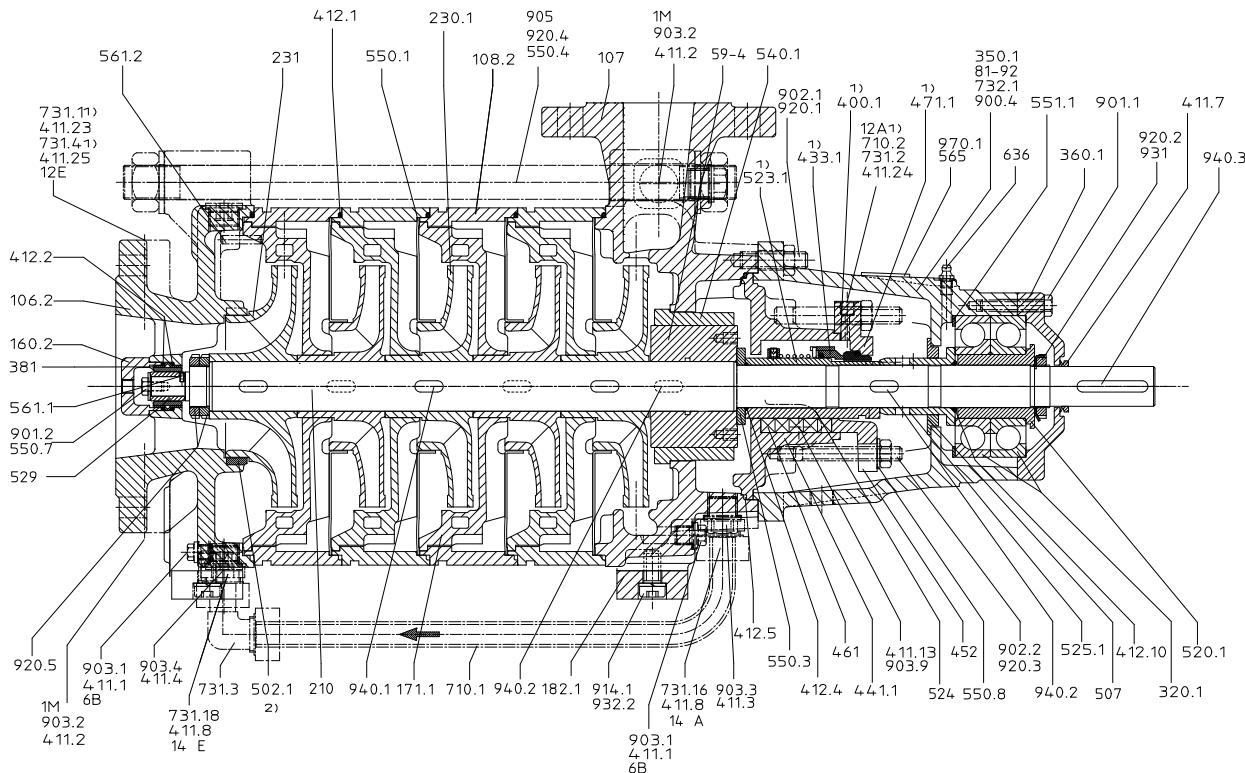

3

4 - 90° offset to the right

4
